Claude Certified Associate – Foundations

Full Practice Question Set — Second Edition

Revised 5 November 2026 · Written following Exam Guide v1.0 (July 2026) · 60 questions

Anthropic's exam guide for the **Claude Certified Associate – Foundations** certification includes just three sample questions, and no official practice exam is available. Having sat and passed the exam, I wrote this practice set to fill that gap. This second edition has been rewritten from the ground up based on reader feedback so that it mirrors the style, depth and formats of the real items far more closely: short, role-based business scenarios; plain vocabulary pitched at the professionals the exam is written for; the exam's own product, feature and model terminology; and ordering items alongside multiple choice and multiple response.

The set contains 60 questions, the same as the real exam, distributed across the seven content domains in proportion to the official blueprint weights and pitched at the difficulty I experienced on exam day. Answers are at the back with concise rationales, so you can attempt each domain cold before checking your reasoning.

Important: these are original practice questions written against the publicly available exam guide and its blueprint objectives. **They are not actual exam content, are not drawn from the live item bank, and do not reproduce any question I encountered.** Exam content is confidential and protected by NDA, as yours will be too. No practice set guarantees a pass; use this alongside hands-on experience and the official documentation.

How the 60 questions are distributed

The blueprint weights from the exam guide, applied to 60 items:

1. Prompting and Task Execution — 14% → 8 questions
2. Output Evaluation and Validation — 21% → 13 questions
3. Product and Model Selection — 12% → 7 questions
4. Workflow Integration and Solution Design — 16% → 10 questions
5. Configuration and Knowledge Management — 12% → 7 questions
6. Governance, Risk, and Responsible Use — 15% → 9 questions
7. Troubleshooting and Optimization — 10% → 6 questions

Question formats you'll encounter

- **Multiple choice.** One correct answer among four options. This is the most common format on the exam. Distractors are plausible — expect to choose between a good answer and the best answer, not between right and obviously wrong.
- **Multiple response.** Select two or more correct answers from the list of options. The question will tell you how many items to select.
- **Ordering.** Five steps of a process are listed in a scrambled, numbered order, and four candidate sequences are offered as options A–D. Select the sequence that puts the steps in the right order.

Domain 1: Prompting and Task Execution (14%)

Question 1.1 · Multiple choice · select ONE

A communications officer wants Claude to draft an all-staff email announcing a change to the office entry system. Her first prompt was "Write an email about the new door access cards" and the draft was generic.

Which revision is most likely to produce a usable first draft?

- **A.** "Draft a 200-word all-staff email from Facilities: new access cards replace the keypads from 1 March; reassuring tone; close with where to collect a card."
- **B.** "Write a professional, reassuring email about the new door access cards that staff across all our offices will find easy to read and act on."
- **C.** "Write three different emails about the new door access cards, each in a different tone, so that I can choose the strongest one to send."
- **D.** "You are an award-winning corporate communicator with decades of experience writing for large organisations. Write an email about the new door access cards."

Question 1.2 · Multiple choice · select ONE

A policy analyst uses the same prompt structure for every task: a role, the task and a word limit. It works well for summaries, but brainstorming requests keep returning a short, safe list of ideas.

Which adjustment best reflects adapting the prompting strategy to the task type?

- **A.** Raise the word limit so that Claude has room to explain each idea in more depth and justify it.
- **B.** Drop the word limit, ask for many varied ideas, and judge quality only once the list exists.
- **C.** Ask Claude for the single best idea with a full justification, so that quality replaces quantity.
- **D.** Add "be creative" to the role description and keep the task line and the word limit exactly as they are.

Question 1.3 · Multiple choice · select ONE

An operations lead asks Claude, in one prompt, to review 40 supplier contracts, extract the renewal dates, flag unfavourable terms and draft renegotiation emails. The output covers some contracts thoroughly and skips others.

Which change is most likely to fix the problem?

- **A.** Resubmit the same prompt with "make sure that every one of the 40 contracts is covered" added at the end.
- **B.** Switch to a more capable model so that the single prompt can handle the full workload in one pass.
- **C.** Split the request into stages (dates, then terms, then emails) and check each stage before moving on.
- **D.** Ask Claude to work through the contracts in alphabetical order and number each one so that none are overlooked.

Question 1.4 · Multiple choice · select ONE

A grants officer asked Claude to rewrite a funding application summary. The draft is accurate, but the tone is too informal and it omits the project's $240,000 budget.

Which follow-up prompt best reflects effective iteration?

- **A.** "That is not quite right for a funding application. Please try again and produce a better, more polished version."
- **B.** "Rewrite the whole summary from scratch, and this time make it formal enough for a government assessor to read."
- **C.** "Which parts of the summary do you think are too informal, and what would you change about them before I send it?"
- **D.** "Keep the content, make the tone formal for a government assessor, and add the $240,000 budget to the first paragraph."

Question 1.5 · Multiple response · choose TWO

A sales coordinator is drafting a prompt for Claude to turn her notes from a client meeting into a follow-up email.

Which two elements should the prompt include? (Choose two.)

Each correct answer presents part of the solution.

- **A.** An instruction to make the email as long as necessary to cover everything discussed.
- **B.** Every email the coordinator has sent this year, so that the writing style is reproduced exactly.
- **C.** The meeting notes themselves, clearly separated from the instructions.
- **D.** A request for Claude to rate how confident it is in the accuracy of the email.
- **E.** The intended reader and the outcome the email should achieve, such as confirming next steps and securing a demonstration date.

Question 1.6 · Multiple response · choose TWO

A project manager is decomposing "prepare the quarterly board pack" into tasks that Claude can help with.

Which two sub-tasks are well formed for a single prompt each? (Choose two.)

Each correct answer presents a complete solution.

- **A.** Summarise the attached risk register into five bullet points for a non-technical audience.
- **B.** Review all of the attachments and point out anything the board might want to know.
- **C.** Produce the entire board pack, including financials, risks and recommendations, in one pass.
- **D.** Convert the attached project status table into a short narrative paragraph for each project.
- **E.** Decide which projects the board should cancel, based on the status table.

Question 1.7 · Multiple response · choose TWO

Claude's first draft of a product FAQ is accurate, but each answer runs to three paragraphs and the language is too technical for first-time customers.

Which two refinements would most improve the draft? (Choose two.)

Each correct answer presents a complete solution.

- **A.** Resubmit the original prompt and ask Claude to try harder this time to keep the answers short.
- **B.** Provide one example answer in the style the team wants and ask Claude to match it.
- **C.** Ask Claude to explain why the answers came out so long and technical before it makes any changes.
- **D.** Specify two sentences per answer at most, and a reading level suited to first-time customers.
- **E.** Remove the attached product specification so that Claude has less material to expand on in each answer.

Question 1.8 · Ordering · select ONE

You are a marketing coordinator preparing a prompt for a research-style task: a comparison of three competitors' loyalty programmes.

Which is the correct order of steps?

(1) Write the prompt, referring to the attached sources and stating the task, the comparison criteria and the output format.
(2) Define the question the comparison must answer and who will read it.
(3) Refine the prompt to address the gaps and run it again.
(4) Review the output against the sources and note the gaps.
(5) Gather and attach the source material on each programme.

- **A.** 2, 1, 5, 4, 3
- **B.** 1, 5, 2, 4, 3
- **C.** 2, 5, 1, 4, 3
- **D.** 5, 2, 1, 3, 4

Domain 2: Output Evaluation and Validation (21%)

Question 2.1 · Multiple choice · select ONE

A communications officer asked Claude to summarise a 30-page annual report. The summary includes a direct quote attributed to the chief executive that the officer does not recognise.

What is the most appropriate first step?

- **A.** Search the report for the quote; if it is absent, remove it and tell Claude to use only wording from the document.
- **B.** Keep the quote, since Claude had the full 30-page report available and is unlikely to invent a direct quotation from it.
- **C.** Paraphrase the quote and attribute it loosely, so that it no longer has to be reproduced word for word.
- **D.** Ask Claude whether the quote is genuine and where it appears, and keep it if Claude confirms that it is real.

Question 2.2 · Multiple choice · select ONE

An HR adviser asked Claude to list every type of leave mentioned in the enterprise agreement. The list looks right, but she needs to be sure that it is complete.

Which check is most effective?

- **A.** Ask the same question again in a new chat and accept the list if both answers match.
- **B.** Search the agreement for the word "leave" and compare each occurrence with Claude's list.
- **C.** Ask Claude to confirm that the list is complete and add anything that was missed.
- **D.** Count the items in Claude's list against the number of leave clauses in the table of contents.

Question 2.3 · Multiple choice · select ONE

A recruiter asked Claude to draft a shortlisting rationale for a graduate programme. The draft notes that applicants from two named universities "tend to be stronger communicators".

Which response from the recruiter is most appropriate?

- **A.** Keep the statement, since it reflects a pattern the selection panel has also noticed informally over several intakes.
- **B.** Keep the rankings but delete the rationale, so that the statement is not visible to the panel when it meets.
- **C.** Add a sentence noting that the observation may not apply to every applicant, and keep the rest of the rationale as it is.
- **D.** Remove the generalisation and have Claude justify each ranking from the evidence in that applicant's application.

Question 2.4 · Multiple choice · select ONE

A finance analyst at Brightmere Energy used Claude to draft a reply to a customer disputing a $3,200 invoice. The draft offers a partial credit.

Which factor most strongly indicates that a person should review the reply before it is sent?

- **A.** The reply was produced in a single pass, without any of the prompt iteration the team normally applies.
- **B.** The reply commits the organisation to a credit that the analyst may not have the authority to offer.
- **C.** The draft is written in a more formal register than the analyst usually uses with this customer.
- **D.** The customer's original email was considerably longer and more detailed than the drafted reply.

Question 2.5 · Multiple choice · select ONE

A policy officer has a Claude-drafted briefing written for the executive team and now needs a version for frontline staff.

Which approach is most effective?

- **A.** Ask Claude to adapt it for frontline staff: what they must do differently, minus the budget and strategy detail.
- **B.** Ask Claude to cut the briefing to half its length, since frontline staff have less time to read than executives do.
- **C.** Send the executive briefing unchanged with a covering note saying that staff may skip any sections that do not apply.
- **D.** Ask Claude to replace the technical terms with simpler words and keep the structure and content otherwise unchanged.

Question 2.6 · Multiple choice · select ONE

A project coordinator has asked Claude to compile a comparison of four venue quotes. The team will sort and filter the comparison by price, capacity and available dates.

Which output format should she request?

- **A.** A table with a row per venue and a column per criterion, in a format she can open in a spreadsheet.
- **B.** A slide for each venue so that the comparison can be presented and discussed at the next team meeting.
- **C.** A narrative summary of each venue's strengths and weaknesses in prose, with a recommendation at the end.
- **D.** An inline bulleted list grouped by venue, with the price, capacity and dates for each shown in bold.

Question 2.7 · Multiple choice · select ONE

Claude's summary of a competitor's media release includes three specific figures: revenue, headcount and number of stores. The marketing manager has the media release open in another window.

Which validation approach is most appropriate?

- **A.** Check one of the three figures at random; if it is correct, the other two are very likely to be correct as well.
- **B.** Compare the figures with the competitor's reported figures from last year to see whether they look reasonable.
- **C.** Ask Claude to re-read the media release carefully and confirm whether each of the three figures is accurate.
- **D.** Check each figure against the release and ask Claude to quote the source sentence for any it cannot find.

Question 2.8 · Multiple response · choose TWO

A procurement officer is reviewing a Claude-drafted market analysis before it goes to the tender committee.

Which two signs most strongly suggest that the analysis may contain hallucinated material? (Choose two.)

Each correct answer presents a complete solution.

- **A.** A cited industry report has a title and publication date, but the officer cannot locate it anywhere.
- **B.** The analysis is written in a confident tone with few hedging phrases or qualifications.
- **C.** The analysis uses Australian spelling throughout, while most of the source material uses American spelling.
- **D.** Two paragraphs give different figures for the size of the same market without noting the discrepancy.
- **E.** The analysis is noticeably shorter than the officer expected for a topic of this breadth and complexity.

Question 2.9 · Multiple response · choose TWO

A customer-support team leader is deciding which Claude-drafted outputs may be sent without a second reviewer.

Which two outputs most clearly require human review before release? (Choose two.)

Each correct answer presents a complete solution.

- **A.** An internal summary of the week's most common support topics for the team meeting.
- **B.** An apology email that offers a refund outside the published refund policy.
- **C.** A reply to a routine password-reset request that follows the standard template.
- **D.** A plain-language rewording of an existing approved help-centre article.
- **E.** A response to a complaint that explains the customer's rights under consumer law.

Question 2.10 · Multiple response · choose TWO

A communications officer asked Claude for two versions of a media statement and must choose one.

Which two criteria are the most useful basis for the comparison? (Choose two.)

Each correct answer presents part of the solution.

- **A.** Which version Claude recommends when asked to pick its own best effort.
- **B.** Which version is longer, since a longer statement covers more ground.
- **C.** Whether each version's tone matches what the intended readers, local journalists, expect.
- **D.** Which version Claude produced first, since the first attempt is usually closest to the original intent.
- **E.** Whether each version includes the three facts the organisation has agreed to disclose.

Question 2.11 · Multiple response · choose TWO

An education coordinator wants Claude's help turning 80 free-text survey comments into something useful for a staff meeting.

Which two outputs are appropriate for the purpose? (Choose two.)

Each correct answer presents a complete solution.

- **A.** A summary that emphasises the positive comments so that the meeting ends on a high note.
- **B.** All 80 comments rewritten in a consistent tone so that they read smoothly when projected.
- **C.** A short list of recurring themes, each with a count and one or two illustrative quotes.
- **D.** A single overall sentiment score, presented without the supporting comments or detail.
- **E.** A table of comments tagged by theme and sentiment that staff can filter after the meeting.

Question 2.12 · Ordering · select ONE

You are an analyst validating a Claude-generated summary of a government consultation paper before it goes to your director.

Which is the correct order of steps?

(1) Locate each highlighted claim in the consultation paper.
(2) Choose between fixing the summary yourself, re-running the prompt with the paper, or raising it with your director.
(3) Read the summary and highlight every claim, figure and citation that can be checked.
(4) Add a note to the summary saying what has been checked and what was changed.
(5) Note any claim you could not find, and how much it matters.

- **A.** 3, 1, 5, 2, 4
- **B.** 1, 3, 5, 2, 4
- **C.** 3, 1, 2, 5, 4
- **D.** 3, 5, 1, 2, 4

Question 2.13 · Ordering · select ONE

You are a marketing coordinator adapting a Claude-drafted internal product briefing into a customer-facing article.

Which is the correct order of steps?

(1) Ask Claude to rewrite for that audience with the stated tone and length.
(2) Send the article to the product owner for approval before publishing.
(3) Identify the audience and what they need from the article.
(4) Check the rewrite for accuracy against the original briefing.
(5) Strip internal-only content, such as pricing strategy and the product roadmap, from the briefing before it is used as the source.

A. 3, 1, 5, 4, 2
B. 3, 5, 1, 4, 2
C. 5, 3, 1, 2, 4
D. 3, 5, 4, 1, 2

Domain 3: Product and Model Selection (12%)

Question 3.1 · Multiple choice · select ONE

A grants officer prepares a similar assessment report every fortnight using the same scoring rubric and report template.

Which Claude feature best fits this pattern of work?

- **A.** A single long-running chat that is never closed, so that the rubric and the earlier reports stay in context.
- **B.** A fresh chat each fortnight with the rubric and template pasted in, which keeps the context small and current.
- **C.** Research mode, so that Claude can look up each applicant organisation before applying the rubric.
- **D.** A Project with the rubric and template as knowledge and instructions, so that each new chat starts with them.

Question 3.2 · Multiple choice · select ONE

A customer-service manager wants Claude to tag 5,000 short feedback comments with one of eight topic labels. Speed and cost matter, and the judgement needed per comment is light.

Which model choice best aligns with the task?

- **A.** Sonnet, because the mid-tier model is the safe default whenever accuracy and cost both matter.
- **B.** Alternate between the three models so that no single model's weaknesses affect the whole batch.
- **C.** Haiku, because the per-item reasoning is simple and the volume rewards speed and low cost.
- **D.** Opus, because the most capable model gives the highest accuracy on any labelling task.

Question 3.3 · Multiple choice · select ONE

A business analyst has been working in one long chat with Claude for three days, covering four unrelated pieces of work. Claude has started mixing details from the different pieces.

What is the most appropriate action?

- **A.** Start a new chat per piece of work, seeded with a short summary of the decisions made so far.
- **B.** Paste the whole chat history into a new chat so that no detail from the three days is lost.
- **C.** Switch to a more capable model within the same chat so that it can keep track of more context at once.
- **D.** Continue in the same chat but tell Claude to ignore everything before today and treat each request as new.

Question 3.4 · Multiple choice · select ONE

A policy officer needs an up-to-date overview of how five Australian states regulate short-term rental accommodation, with sources she can cite.

Which feature is the best fit?

A. An artifact, because the final output will be a structured document.

B. Research mode, because the task needs current information gathered from multiple sources with citations.

C. A Project containing her existing policy notes, because the answer should be grounded in the organisation's documents.

D. A standard chat, because Claude's training knowledge already covers Australian regulation.

Question 3.5 · Multiple response · choose TWO

A legal operations lead is choosing a model for reviewing complex contract clauses. A missed nuance could be costly, and the volume is low: around ten documents a week.

Which two statements support a sound selection? (Choose two.)

Each correct answer presents part of the solution.

A. The cost of a missed nuance outweighs the speed advantage of a lighter model.

B. The fastest model is the best choice because lawyers need quick turnaround.

C. All models produce the same results on text analysis, so the cheapest should be chosen.

D. The mid-tier model should always be used for legal content because it is the recommended default.

E. The low volume means the higher cost of the most capable model has little effect on the overall budget.

Question 3.6 · Multiple response · choose TWO

A communications manager uses Claude for a long campaign-planning conversation that runs over several weeks.

Which two practices help manage context limitations well? (Choose two.)

Each correct answer presents a complete solution.

A. Keep all of the team's campaigns in one chat so that Claude can draw connections between them over time.

B. Paste every related email thread into the chat so that Claude has the complete history of the campaign to draw on.

C. Avoid asking follow-up questions where possible, since each one uses up some of the available context.

D. Ask Claude for a summary of decisions so far and use it to start a fresh chat when the conversation grows long.

E. Keep stable material such as the brand guidelines and campaign brief in a Project instead of re-pasting it.

Question 3.7 · Ordering · select ONE

You are an operations lead choosing a Claude model for a new recurring task.

Which is the correct order of steps?

(1) Test on a representative sample and compare the results with the requirement.
(2) Define the task's requirements: the accuracy needed, volume, turnaround and budget.
(3) Confirm the choice, or move up a tier and test again.
(4) Choose the lightest model that is likely to satisfy that requirement.
(5) Identify which requirement matters most.

A. 2, 4, 5, 1, 3
B. 5, 2, 4, 1, 3
C. 2, 5, 1, 4, 3
D. 2, 5, 4, 1, 3

Domain 4: Workflow Integration and Solution Design (16%)

Question 4.1 · Multiple choice · select ONE

A project manager has notes from six stakeholder interviews about a new leave-request process and wants to use Claude for requirements analysis.

Which use of Claude is most appropriate?

- **A.** Ask Claude to write the final process design directly from the interview notes, so that analysis and design happen in one step.
- **B.** Ask Claude to extract requirements into a list, noting the source stakeholder for each and where they conflict.
- **C.** Ask Claude to generate the requirements for a leave-request process from general knowledge, then compare them with the notes.
- **D.** Ask Claude to decide which stakeholders' requirements take priority, based on their seniority and job titles.

Question 4.2 · Multiple choice · select ONE

A finance team's month-end process has twelve steps. One step, writing the variance commentary from a spreadsheet of figures, takes an analyst two days.

Which integration approach is most sensible?

- **A.** Wait until Claude can perform the full month-end process before changing anything, to avoid a half-done redesign.
- **B.** Use Claude to produce the spreadsheet of figures, since that is the input to the slow step and the figures drive the commentary.
- **C.** Use Claude to draft the commentary from the spreadsheet, with the analyst reviewing and finalising it.
- **D.** Redesign all twelve steps around Claude so that the whole month-end process benefits at the same time.

Question 4.3 · Multiple choice · select ONE

An operations manager at Kerrigan Freight is presenting a Claude-assisted invoice-triage workflow to the executive team.

Which statement best communicates Claude's value and its limitations?

- **A.** "Claude handles invoice triage from end to end, so the team can be redeployed to higher-value work from the start of next quarter."
- **B.** "Claude sorts and drafts replies for the 70 per cent of invoices that are routine; exceptions and approvals over $5,000 go to a person."
- **C.** "Claude is a tool like any other; the results depend entirely on how well our people use it, so training is the priority."
- **D.** "Claude will make occasional mistakes, so we recommend that the executive team reviews a sample of its output at the weekly meeting."

Question 4.4 · Multiple choice · select ONE

A community-engagement officer has to plan a six-week public consultation and has a clear brief: objectives, constraints and a stakeholder list.

Which use of Claude best supports the planning?

- **A.** Ask Claude to draft a week-by-week plan from the brief, then refine the plan with the team.
- **B.** Ask Claude only to format the plan the officer has already written, since planning needs human judgement.
- **C.** Ask Claude to produce the plan and adopt it as final to save time.
- **D.** Ask Claude to run the consultation sessions so that the officer can concentrate on the analysis.

Question 4.5 · Multiple choice · select ONE

A training coordinator is using Claude to design a new onboarding checklist. After the first draft, the HR manager raises two concerns about the sequence of steps; the rest is accepted.

What is the most effective way to iterate?

- **A.** Fix the sequence issues and also ask Claude to improve the wording throughout, since the document is open anyway.
- **B.** Ask Claude to regenerate the whole checklist with the two concerns included, since a fresh draft will be more coherent.
- **C.** Accept the checklist as it stands and address the sequence concerns in a later version once it has been in use.
- **D.** Ask Claude to revise only the sequence issues raised, keep the accepted content as it is, and record what changed.

Question 4.6 · Multiple response · choose TWO

The customer-service lead at Marlow Shire Council is identifying where Claude could help the team.

Which two use cases are the strongest candidates for a first pilot? (Choose two.)

Each correct answer presents a complete solution.

- **A.** Drafting replies to common enquiries from the published fees and opening-hours information, for staff to check and send.
- **B.** Deciding which development applications to approve, based on the planning rules.
- **C.** Summarising long resident complaints into a short issue statement for the case officer.
- **D.** Calculating the rates notice for every property, since the formula is published.
- **E.** Replacing the phone line with Claude so that residents no longer need to speak to staff.

Question 4.7 · Multiple response · choose TWO

An HR team wants to integrate Claude into its existing position-description workflow without disrupting it.

Which two actions reflect sound integration practice? (Choose two.)

Each correct answer presents part of the solution.

A. Roll Claude out to the whole team on day one so that everyone benefits at once.

B. Ask each team member to find their own way of using Claude so that adoption is organic.

C. Replace the existing approval step with Claude's own quality check to remove a bottleneck.

D. Trial Claude on that step with three team members and compare the time taken with the current baseline.

E. Map the current workflow first to find the step where drafting takes the most time.

Question 4.8 · Multiple response · choose TWO

A project lead is writing a one-page note to stakeholders about a new Claude-assisted reporting process.

Which two points belong in the note? (Choose two.)

Each correct answer presents part of the solution.

A. Which parts of the report Claude drafts and which parts a person writes and signs off.

B. A statement that stakeholders no longer need to review the report, since Claude checks it.

C. The known limitations, such as the need to verify figures before the report is circulated.

D. A commitment that the process will not produce errors once it is fully configured.

E. A detailed description of how the model was trained, so that stakeholders can trust it.

Question 4.9 · Ordering · select ONE

You are an operations analyst using Claude to improve a slow purchase-order approval process.

Which is the correct order of steps?

(1) Identify the step causing the most delay.
(2) Roll out and document the new process.
(3) Ask Claude to propose options for that step, given the constraints.
(4) Document the current process, who owns each step and how long each step takes.
(5) Pilot the chosen option with one team and measure it against the baseline.

A. 4, 3, 1, 5, 2

B. 1, 4, 3, 5, 2

C. 4, 1, 3, 2, 5

D. 4, 1, 3, 5, 2

Question 4.10 · Ordering · select ONE

You are a learning designer using Claude to develop a new induction module.

Which is the correct order of steps?

(1) Ask Claude to draft a module outline against the outcomes and the policy documents.
(2) Gather the existing policy documents the module must reflect.
(3) Review the outline with the expert and note the changes.
(4) Agree the learning outcomes and the audience with the subject-matter expert.
(5) Ask Claude to revise the outline and draft the content for each section.

A. 4, 2, 1, 5, 3
B. 4, 2, 1, 3, 5
C. 1, 4, 2, 3, 5
D. 4, 1, 2, 3, 5

Domain 5: Configuration and Knowledge Management (12%)

Question 5.1 · Multiple choice · select ONE

A communications team is setting up a Project for drafting media releases.

Which combination best configures the Project?

- **A.** Instructions describing the organisation's history, structure and values in detail, so that Claude understands the context.
- **B.** Every media release the organisation has issued in the last five years added as knowledge, with no instructions at all.
- **C.** Role, house style and release structure in the instructions; the style guide and three approved releases as knowledge.
- **D.** Instructions giving Claude's role only, with the style guide pasted into each chat as and when it is needed for a particular release.

Question 5.2 · Multiple choice · select ONE

An HR team's Project instructions read, in full, "Be helpful and accurate." Outputs vary widely in format and tone.

Which revision is most likely to improve consistency?

- **A.** Add "be consistent in format and tone" to the existing instruction, so that both requirements are explicit.
- **B.** Remove the instructions altogether so that Claude can use its own judgement about what each request needs.
- **C.** Replace the instruction with a detailed description of the HR team's responsibilities and the services it provides.
- **D.** State the audience, tone, standard output structure, and what to do when information is missing.

Question 5.3 · Multiple choice · select ONE

A sales enablement manager at Orlo Office Supplies built a Project in February with the product catalogue as knowledge. In August, Claude is still quoting prices that changed in June.

What is the most appropriate action?

- **A.** Replace the catalogue in the Project with the current version and have Claude state the catalogue date in each answer.
- **B.** Add the new price list alongside the old catalogue in the Project so that Claude has both versions available.
- **C.** Tell Claude at the start of each chat that prices changed in June and that any figures from the old catalogue should be ignored.
- **D.** Delete the Project and use a plain chat with the current price list pasted in whenever a price is needed.

Question 5.4 · Multiple choice · select ONE

A project coordinator wants Claude to answer questions using the team's project documents, which live in Google Drive and change weekly.

Which approach is most appropriate?

- **A.** Copy the text of each document into the Project's instructions and update it when the documents change.
- **B.** Download the documents each week and upload the latest versions to the chat as attachments.
- **C.** Connect Google Drive so that Claude can reference the current documents when asked.
- **D.** Upload the documents once and ask Claude to remember their contents for future conversations.

Question 5.5 · Multiple response · choose TWO

An operations team is choosing which files to add as knowledge to a Project that answers staff questions about procedures.

Which two files are appropriate to include? (Choose two.)

Each correct answer presents a complete solution.

- **A.** The current standard operating procedures manual.
- **B.** Every email the team has received in the past year, so that Claude has the full context.
- **C.** A spreadsheet of staff home addresses used for emergency contact.
- **D.** A short glossary of internal terms and system names.
- **E.** The complete archive of superseded procedures, in case they are needed for comparison.

Question 5.6 · Multiple response · choose TWO

A marketing lead is writing Project instructions for a social-media drafting assistant.

Which two instructions are well formed? (Choose two.)

Each correct answer presents a complete solution.

- **A.** "Be creative and engaging, and make every post something that people will want to share."
- **B.** "If a request needs a product fact that is not in the knowledge files, say so rather than guessing."
- **C.** "Use your best judgement about tone, length and audience for each post, depending on the request."
- **D.** "Write for small-business owners in a warm, plain-English tone; keep each post under 80 words."
- **E.** "Always include at least ten hashtags to maximise reach, whatever the platform or the subject of the post."

Question 5.7 · Ordering · select ONE

You are the owner of a shared Project used by a team of twelve. A policy the Project relies on has changed.

Which is the correct order of steps?

(1) Update the instructions where they describe the old policy.
(2) Tell the team what changed and the date it took effect.
(3) Identify which knowledge files and instructions refer to the old policy.
(4) Test with a few typical prompts to confirm that answers reflect the new policy.
(5) Replace the outdated files with the current version.

A. 3, 5, 1, 4, 2
B. 5, 3, 1, 4, 2
C. 3, 5, 1, 2, 4
D. 3, 1, 5, 2, 4

Domain 6: Governance, Risk, and Responsible Use (15%)

Question 6.1 · Multiple choice · select ONE

A payroll officer wants Claude to find patterns in overtime claims. The spreadsheet contains employee names, tax file numbers and bank details. Policy prohibits sharing identifiable personal data with AI tools.

What is the most appropriate action?

- **A.** Upload the spreadsheet but instruct Claude not to read or use the columns that contain personal details.
- **B.** Upload only the first 50 rows so that the exposure is limited while the pattern analysis is tested.
- **C.** Remove names, tax file numbers and bank details, keep an anonymised ID with each claim, and proceed.
- **D.** Ask Claude to anonymise the spreadsheet first, then analyse the anonymised version it has produced.

Question 6.2 · Multiple choice · select ONE

A team leader in a government agency is considering tasks to hand to Claude.

Which task is an appropriate use?

- **A.** Producing a legal opinion on a contract dispute that will be relied on without a lawyer's review.
- **B.** Drafting a plain-language version of a published policy for the website, for review before publication.
- **C.** Determining whether an individual's application for a benefit should be approved, from the submitted form.
- **D.** Making the final decision on which staff members receive a performance bonus this year, from their reviews.

Question 6.3 · Multiple choice · select ONE

A marketing associate at Tallowood Credit Union finds that Claude drafts customer emails much faster than the current approved tool. The organisation's AI policy requires new AI uses to be registered and assessed before use.

What should she do?

- **A.** Start using Claude for internal drafts only, since the policy is aimed at external communications.
- **B.** Use Claude for the emails now and register the use once the benefit has been proven.
- **C.** Register the proposed use and complete the assessment before using Claude for customer emails.
- **D.** Ask her manager for verbal approval and proceed while the assessment is scheduled.

Question 6.4 · Multiple choice · select ONE

A communications team is using Claude to help draft a public awareness campaign.

Which practice best reflects ethical use?

A. Avoid mentioning the AI involvement, since a person reviewed and approved the content before it was published and is named on it.

B. Attribute the campaign to Claude in the credits so that the audience knows that a person did not write it.

C. Use Claude only for the first draft and rewrite it substantially so that disclosure is not required.

D. Disclose AI assistance where policy or audience expectations call for it, and keep a named person accountable.

Question 6.5 · Multiple response · choose TWO

A health-promotion officer is preparing to use Claude to analyse free-text responses from a community survey.

Which two considerations are most important before the responses are uploaded? (Choose two.)

Each correct answer presents part of the solution.

A. Whether the survey's privacy notice allowed the responses to be processed by a third-party tool.

B. Whether the responses contain information that could identify an individual respondent.

C. Whether the responses were collected through an online form or on paper at community events.

D. Whether the responses are long and detailed enough for Claude to find meaningful themes in them.

E. Whether Claude's analysis is likely to agree with the conclusions the officer has already reached.

Question 6.6 · Multiple response · choose TWO

An operations manager is reviewing Claude use cases proposed by her team.

Which two should she decline or refer for further assessment? (Choose two.)

Each correct answer presents a complete solution.

A. Summarising a client's unredacted contract that carries a confidentiality clause.

B. Screening job applicants and automatically rejecting those Claude scores below a threshold.

C. Drafting agendas and summarising the notes for the weekly team meeting, for the manager to check.

D. Explaining an unfamiliar spreadsheet formula that a team member found in an inherited workbook.

E. Suggesting alternative wording for an internal staff newsletter before it goes to the editor.

Question 6.7 · Multiple response · choose TWO

A regional manager at Halden Insurance is rolling out Claude to 40 staff.

Which two actions best support compliance with the organisation's AI governance standards? (Choose two.)

Each correct answer presents part of the solution.

- **A.** Restrict Claude to managers for the first year, since they are more accountable than other staff.
- **B.** Provide a short guide listing approved use cases and the categories of data that must not be entered.
- **C.** Nominate a contact who reviews new use cases and records them in the organisation's AI register.
- **D.** Allow staff to use personal Claude accounts so that the rollout is not held up by the procurement process.
- **E.** Ask staff to agree informally not to enter sensitive data, and trust them to apply common sense.

Question 6.8 · Ordering · select ONE

You are a team leader deciding whether a proposed Claude use case that involves customer records can go ahead.

Which is the correct order of steps?

(1) Work out who would be affected if an output were wrong, and whether the error could be undone.
(2) List the data fields the use case needs and flag any that identify a person.
(3) Write up the outcome and the reasons for it.
(4) Compare the proposal with the AI policy and the privacy obligations that apply.
(5) Approve it, approve it with changes such as removing identifiers, or decline it.

- **A.** 2, 4, 1, 3, 5
- **B.** 2, 1, 4, 5, 3
- **C.** 2, 1, 5, 4, 3
- **D.** 4, 2, 1, 5, 3

Question 6.9 · Ordering · select ONE

You are a communications officer who has discovered that a colleague pasted a customer list containing personal details into Claude last week.

Which is the correct order of steps?

(1) Record what data was entered, when, and in which account.
(2) Stop any further use and ask the colleague not to repeat it.
(3) Support any assessment of harm and any notifications that are required.
(4) Report the incident, with that record, through the organisation's privacy or AI incident process.
(5) Share the lesson with the team and update the guidance.

A. 2, 1, 5, 4, 3
B. 2, 4, 1, 3, 5
C. 2, 1, 4, 3, 5
D. 1, 2, 4, 3, 5

Domain 7: Troubleshooting and Optimization (10%)

Question 7.1 · Multiple choice · select ONE

A recruitment coordinator asked Claude to "review this position description" and received a general comment on readability. She wanted specific gaps against the selection criteria.

What is the most likely root cause?

- **A.** The prompt did not state what to review for or what the output should contain.
- **B.** The position description was too long for Claude to analyse properly.
- **C.** The model chosen was too light for a review task.
- **D.** Claude cannot compare a document against criteria unless they are presented in a table.

Question 7.2 · Multiple choice · select ONE

Readers have described an analyst's weekly Claude-drafted dashboard commentary as "too long and too hedged".

Which approach to adjusting is most effective?

- **A.** Ask Claude to write the commentary twice in different styles and send whichever version is shorter.
- **B.** Switch to a different model, since length and tone are characteristics of the model rather than the prompt.
- **C.** Turn the feedback into prompt constraints, such as a word limit, and check the next output against the complaint.
- **D.** Remove all constraints from the prompt so that Claude can decide on an appropriate length and level of certainty.

Question 7.3 · Multiple choice · select ONE

A policy team spends 20 minutes at the start of every Claude session pasting the same background documents and explaining the house style.

Which change best optimises the workflow?

- **A.** Move the documents and style guidance into a Project so that every session starts with them in place.
- **B.** Ask Claude at the end of each session to remember the documents and the style guidance for next time.
- **C.** Shorten the background documents so that pasting them and explaining the style takes less time.
- **D.** Assign one team member to do all of the pasting so that the others can start their work immediately.

Question 7.4 · Multiple response · choose TWO

A prompt asked for "a summary of the attached report, the three main risks, and a recommended next step". Claude's response contains only the summary.

Which two changes are most likely to fix the problem? (Choose two.)

Each correct answer presents a complete solution.

- **A.** Ask Claude to confirm that it has understood the request before answering.
- **B.** Replace "summary" with "overview", since the word may have narrowed the response.
- **C.** List the three required parts as numbered items in the prompt and ask for a heading for each.
- **D.** Give the required output structure as a short template showing the three sections.
- **E.** Attach the report twice so that Claude has it in context for each part of the answer.

Question 7.5 · Multiple response · choose TWO

A team's Claude-drafted customer replies have improved after several prompt changes, but the team leader wants to know which change actually helped.

Which two practices make that clear? (Choose two.)

Each correct answer presents part of the solution.

- **A.** Judge improvement by whether the team leader prefers the latest draft to the previous one.
- **B.** Score each output against the same checklist of criteria before and after a change.
- **C.** Change one element of the prompt at a time and keep the test inputs the same.
- **D.** Ask Claude which of the changes it found most helpful.
- **E.** Make all of the changes at once so that the improvement is as large as possible.

Question 7.6 · Ordering · select ONE

You are a project officer troubleshooting a Claude prompt that keeps producing an off-target weekly status report.

Which is the correct order of steps?

(1) Make one targeted change to the prompt.
(2) Compare the output with what was expected and name the specific gap.
(3) Keep the change if it helped; otherwise revert it and try the next hypothesis.
(4) Check whether the prompt actually states the missing expectation.
(5) Run the prompt again on the same inputs and compare it with the original expectation.

- **A.** 2, 4, 5, 1, 3
- **B.** 4, 2, 1, 5, 3
- **C.** 2, 1, 4, 5, 3
- **D.** 2, 4, 1, 5, 3

Answer Key & Rationales

Detailed reasoning for each correct answer, with a brief note on why the remaining options fall short. For ordering items the correct sequence of steps is shown after the letter.

Domain 1: Prompting and Task Execution

1.1 — Correct: A

An effective business prompt states the sender, audience, length, the specific facts to convey, the tone and the closing action. Claude can only be specific when the prompt is.

Why not the others: B adds tone but still omits the facts, sender and call to action; C multiplies a vague request rather than improving it; D assigns a role without saying what the email must contain.

1.2 — Correct: B

Brainstorming rewards breadth and deferred judgement; summarising rewards compression. A template tuned for one task type will constrain the other, so the constraints need to change with the task.

Why not the others: A produces longer explanations of the same few ideas; C narrows the output further when the problem is too little range; D changes a label, not the constraints that are suppressing range.

1.3 — Correct: C

Skipping items on a large multi-part request is a sign of a decomposition problem. Sequenced sub-tasks give each step a focused context and an output that can be checked before the next step depends on it.

Why not the others: A restates the demand without changing the structure that caused the gaps; B treats capability as the limit when the request's structure is; D changes the order but not the size of the task in one context.

1.4 — Correct: D

Good iteration keeps what worked and names exactly what must change. Both gaps (tone and the missing budget) are specific, so the follow-up should address both specifically.

Why not the others: A gives Claude nothing to act on; B discards the accurate content and still does not mention the budget; C asks for diagnosis when the officer already knows what needs to change.

1.5 — Correct: C, E

A drafting prompt needs the purpose and audience, and it needs the source material presented so that Claude can tell instructions from content.

Why not the others: A a follow-up email should be short; length should be constrained, not opened up; B one or two example emails would help, but a year of them bloats the context; D a self-reported confidence rating is not a reliable accuracy signal.

1.6 — Correct: A, D

A well-formed sub-task has one clear input, one clear output and a defined audience. Both correct options can be completed, checked and reused independently.

Why not the others: B has no defined output and no criteria for what matters; C is the undecomposed task; E is a decision for the board, not a drafting task.

1.7 — Correct: B, D

Explicit constraints and a concrete example both give Claude a target it can hit. Each targets a diagnosed weakness: length and register.

Why not the others: A changes nothing about the prompt; C produces commentary, not a better draft; E removes the source that keeps the answers accurate.

1.8 — Correct: C (2, 5, 1, 4, 3)

Research-style prompts work best when the question and audience are fixed first, the sources are in hand before the prompt is written, and iteration follows a review against those sources.

Why not the others: A writes the prompt before the sources are available to reference; B writes the prompt before the question is defined; D refines before reviewing, so there is nothing to refine against.

Domain 2: Output Evaluation and Validation

2.1 — Correct: A

A specific-looking detail that cannot be located in the source is the classic sign of a fabrication. Checking against the source is quick and decisive, and the instruction prevents a repeat.

Why not the others: B assumes availability of the source prevents fabrication, which it does not; C hides the problem rather than resolving it; D asks the model to verify itself.

2.2 — Correct: B

Completeness can only be confirmed against the source. A keyword sweep of the agreement is a direct, repeatable test that catches anything the model skipped.

Why not the others: A two consistent answers can both be incomplete; C relies on the model to find its own omissions; D the table of contents may not list every leave type.

2.3 — Correct: D

A group-level generalisation applied to individuals is a bias in the output. The fix is to replace it with evidence specific to each applicant, not to caveat it or hide it.

Why not the others: A an informal impression does not make a generalisation fair or evidence-based; B conceals the reasoning instead of correcting it, and the rankings may still rest on it; C leaves the biased reasoning in place with a disclaimer.

2.4 — Correct: B

Human review is required when an output commits the organisation to something with consequences: money, legal position or reputation. Authority to make the concession is the issue.

Why not the others: A the number of iterations says nothing about the stakes; C register is a style preference, not a reason for sign-off; D length is not a risk signal.

2.5 — Correct: A

Adapting for an audience means changing what is included and what the reader is asked to do, not just the length or vocabulary.

Why not the others: B shortens without reconsidering what the audience needs; C pushes the adaptation work onto the reader; D changes words while keeping content written for a different audience.

2.6 — Correct: A

When the next step is sorting and filtering, structured data is the right format. Prose and bullets have to be re-keyed before they can be used that way.

Why not the others: B slides suit presenting, not comparing on criteria; C prose cannot be sorted or filtered; D bullets are readable but not structured.

2.7 — Correct: D

Specific figures with the source at hand should each be checked directly. Asking for the supporting sentence exposes any figure that was inferred rather than extracted.

Why not the others: A sampling one of three figures is not validation; B plausibility is not accuracy; C asks the model to mark its own work.

2.8 — Correct: A, D

Unlocatable citations and internal inconsistency are two of the most reliable indicators of fabricated content.

Why not the others: B confident tone is normal for the model and not a sign either way; C spelling convention is a style matter; E length is not an accuracy signal.

2.9 — Correct: B, E

Legal statements to customers and commitments outside policy both carry consequences if wrong. These are the outputs a person must own before they leave the organisation.

Why not the others: A is internal and low stakes; C is routine and templated; D is grounded in approved content and easily checked.

2.10 — Correct: C, E

Comparison should be against the purpose: required content and audience fit. Everything else is incidental.

Why not the others: A the model's preference is not the audience's; B length is not quality; D order of generation is irrelevant.

2.11 — Correct: C, E

Curating information means reducing it to what the audience needs while keeping a path back to the evidence. Themes with counts and quotes, plus a filterable table, do both.

Why not the others: A misrepresents the data; B preserves the volume and alters the respondents' words; D removes all the detail the meeting needs.

2.12 — Correct: A (3, 1, 5, 2, 4)

Validation runs from identifying claims, to checking them, to recording findings, to deciding, to documenting. Each step depends on the one before it.

Why not the others: B looks for claims in the paper before they have been identified in the summary; C chooses a course of action before the findings have been weighed; D notes missing claims before any have been looked for.

2.13 — Correct: B (3, 5, 1, 4, 2)

Audience first, then strip what the audience must not see, then rewrite, then verify, then approve. Removing internal content before the rewrite stops it leaking into the new draft.

Why not the others: A rewrites before internal content is removed, so it may be carried into the article; C sends for approval before the accuracy check; D checks accuracy before there is a rewrite to check.

Domain 3: Product and Model Selection

3.1 — Correct: D

Projects exist for recurring work with stable reference material: the rubric and template are set once and inherited by every chat.

Why not the others: A a never-ending chat accumulates unrelated context and eventually degrades; B works, but repeats the setup every fortnight and invites inconsistency; C research mode gathers external information; the task is applying a known rubric.

3.2 — Correct: C

High volume, light judgement and a fixed label set is the profile the fastest, lowest-cost tier is designed for. Check a sample, then run the batch.

Why not the others: A a reasonable fallback, but not the best fit when the task is simple; B mixes models without a reason and complicates checking; D pays for reasoning depth the task does not use.

3.3 — Correct: A

Long, mixed conversations degrade. The remedy is a fresh context per task, seeded with a concise summary of what still matters.

Why not the others: B recreates the problem in a new chat; C a bigger model inherits the same tangled context; D the earlier context is still present and still interfering.

3.4 — Correct: B

Current, multi-source, citable information is exactly the case for research mode.

Why not the others: A an artifact is an output surface, not a way of gathering information; C her notes are not the source of current regulation; D training knowledge may be out of date and gives no citations.

3.5 — Correct: A, E

Model selection balances cost, speed and quality against the task. Here quality dominates and cost is immaterial at ten documents a week.

Why not the others: B speed is not the binding requirement; C models differ materially in reasoning depth; D there is no fixed rule by content type.

3.6 — Correct: D, E

Summarise-and-restart and keeping stable material in a Project are the two standard ways of keeping context focused over a long piece of work.

Why not the others: A mixes unrelated work and degrades quality; B fills the context with mostly irrelevant material; C follow-ups are how outputs improve; avoiding them defeats the purpose.

3.7 — Correct: D (2, 5, 4, 1, 3)

Requirements come first, then the priority among them, then the lightest candidate, then evidence, then the decision.

Why not the others: A chooses a model before knowing which requirement is the priority; B prioritises requirements before they have been defined; C tests before any model has been chosen to test.

Domain 4: Workflow Integration and Solution Design

4.1 — Correct: B

Requirements analysis is extraction with traceability: every requirement tied to its source, and conflicts surfaced for people to resolve.

Why not the others: A skips analysis and jumps to design; C invents requirements instead of deriving them from the stakeholders; D delegates a judgement that belongs to the project's governance.

4.2 — Correct: C

Augment the step where the time goes, keep a person on review, and leave a working process alone elsewhere. That is the lowest-risk way to integrate.

Why not the others: A forgoes an available gain for no reason; B targets the wrong step and introduces a calculation risk; D a wholesale redesign for a single bottleneck.

4.3 — Correct: B

Stakeholders need to know what Claude does, what it does not do, and where people remain in control, in concrete terms.

Why not the others: A overstates the capability and removes the human role; C so general that it says nothing about the workflow; D names a limitation but assigns review to the wrong people and omits the value.

4.4 — Correct: A

Claude is strong at turning a brief into a structured first plan; the team then applies local knowledge. That is the division of labour the objective describes.

Why not the others: B forgoes the planning help that is the point of the exercise; C skips the human refinement that catches what the brief did not say; D is not something Claude can do and misplaces the officer's role.

4.5 — Correct: D

Targeted iteration preserves what has been approved, makes the change traceable and keeps the next review short.

Why not the others: A bundles unrequested changes with the requested ones, so the reviewer must re-read everything; B reopens content that was already accepted; C ships a known problem.

4.6 — Correct: A, C

Good first pilots are drafting and summarising tasks with a person in the loop and low consequences if a draft is wrong.

Why not the others: B a regulated decision with legal consequences; D exact calculation at scale belongs in the rating system, not a language model; E removes the human role entirely.

4.7 — Correct: D, E

Integration starts with understanding the existing workflow and proving the change on a small scale against a baseline.

Why not the others: A skips the pilot; B produces inconsistent practice and no measurable result; C removes a human control.

4.8 — Correct: A, C

Honest stakeholder communication describes where Claude assists, where people decide, and what can go wrong.

Why not the others: B removes the human review the process depends on; D an impossible promise; E irrelevant detail that does not build warranted trust.

4.9 — Correct: D (4, 1, 3, 5, 2)

Process optimisation is measure, locate, propose, test, then roll out. The baseline from the first step is what the pilot is measured against.

Why not the others: A asks for options before the bottleneck is known; B identifies the bottleneck before the process has been measured; C rolls out before the pilot.

4.10 — Correct: B (4, 2, 1, 3, 5)

Design follows outcomes and sources; drafting follows design; content follows an approved outline.

Why not the others: A drafts full content before the outline has been reviewed; C drafts before the outcomes have been agreed; D drafts the outline before the source documents are gathered.

Domain 5: Configuration and Knowledge Management

5.1 — Correct: C

A well-configured Project pairs concise instructions (role, style, structure) with a small set of authoritative knowledge files.

Why not the others: A background without any instruction on what to produce; B volume without guidance; old releases will contain superseded style; D the style guide belongs in the Project, not re-pasted.

5.2 — Correct: D

System-level instructions work when they define the audience, tone, structure and behaviour under uncertainty. Vague virtues produce vague results.

Why not the others: A another vague virtue; B removes the only lever for consistency; C describes the team, not the output.

5.3 — Correct: A

Knowledge sources must be maintained. Replacing the stale file fixes the cause; the date instruction makes staleness visible next time.

Why not the others: B leaves two conflicting sources for Claude to choose between; C a per-chat workaround that leaves the wrong source in place; D abandons a useful configuration for a maintenance task.

5.4 — Correct: C

A connector is the right tool when the source of truth lives elsewhere and keeps changing.

Why not the others: A instructions are for guidance, not bulk content, and the copies go stale; B works, but is manual, weekly and easy to forget; D a one-time upload is a snapshot; it will not track weekly changes.

5.5 — Correct: A, D

Project knowledge should be current, authoritative and relevant to the questions the Project answers.

Why not the others: B volume without relevance; C personal data with no bearing on procedures; E superseded content invites wrong answers.

5.6 — Correct: B, D

Good instructions are specific about audience, tone and length, and tell Claude how to behave when it lacks information.

Why not the others: A aspirational, not actionable; C delegates the decisions the instructions exist to make; E a rigid rule that is wrong for most platforms.

5.7 — Correct: A (3, 5, 1, 4, 2)

Maintenance is find, replace, update, verify, then communicate. Testing before telling the team avoids announcing a change that has not actually worked.

Why not the others: B replaces files before knowing which ones are affected; C notifies the team before the change has been tested; D notifies the team before the change has been tested.

Domain 6: Governance, Risk, and Responsible Use

6.1 — Correct: C

De-identify before upload. The analysis needs the claims, not the identities, so the policy and the task are both satisfied.

Why not the others: A the data has already been shared once it is uploaded; B shares less identifiable data, but still shares it; D shares all of it in order to anonymise it.

6.2 — Correct: B

Drafting from public material with human review is squarely appropriate. The others are consequential decisions about people that require human accountability.

Why not the others: A removes the professional review the output depends on; C an administrative decision with legal effect; D a personnel decision with significant impact on individuals.

6.3 — Correct: C

Governance processes exist to catch risks before they materialise. Following them is not optional because the tool is better.

Why not the others: A reinterprets the policy to avoid it; B inverts the order the policy requires; D substitutes informal approval for the required process.

6.4 — Correct: D

Ethical use rests on transparency where it matters and clear human accountability for what is published.

Why not the others: A review does not remove the question of disclosure; B misplaces accountability on the tool; C structures the work to dodge transparency rather than to meet it.

6.5 — Correct: A, B

Identifiability and the terms under which the data was collected are the two privacy questions that decide whether the upload is permissible.

Why not the others: C the collection channel is irrelevant to the privacy obligation; D a quality question, not a privacy one; E confirmation is not the goal of analysis.

6.6 — Correct: A, B

Automated decisions about people and confidential third-party material are the two categories that need governance review before use.

Why not the others: C routine, internal and low risk; D a learning task with no data concern; E routine drafting.

6.7 — Correct: B, C

Clear guidance and a defined review path are what turn a policy into practice.

Why not the others: A seniority is not a governance mechanism; D personal accounts sit outside the organisation's controls; E informal agreement is not a control.

6.8 — Correct: B (2, 1, 4, 5, 3)

Understand the data and the impact first, then test against policy, then decide, then record.

Why not the others: A writes up an outcome that has not yet been decided; C approves or declines before the policy comparison; D compares the proposal with policy before knowing what data is involved.

6.9 — Correct: C (2, 1, 4, 3, 5)

Contain, record, report, support, then learn. Containment comes first because it limits further exposure; the record is what the report is based on.

Why not the others: A shares the lesson before the incident has been reported or assessed; B reports before there is a record of what happened; D records before containing, allowing further exposure meanwhile.

Domain 7: Troubleshooting and Optimization

7.1 — Correct: A

"Review" without criteria or an output specification leaves Claude to guess the purpose. The fix is in the prompt.

Why not the others: B a single position description is well within limits; C any tier can do a criteria check if asked for one; D format is not a prerequisite for comparison.

7.2 — Correct: C

Feedback becomes improvement when it is translated into specific instructions and the next result is checked against the original complaint.

Why not the others: A picks between two unguided outputs instead of fixing the guidance; B length and hedging are controlled by the prompt, not the tier; D removes the levers that control length and tone.

7.3 — Correct: A

Repeated setup is the signal that reference material belongs in a Project. The 20 minutes disappears for everyone.

Why not the others: B memory may retain stated preferences, but it does not carry whole background documents between sessions; a Project does; C reduces the waste slightly instead of removing it; D moves the waste to one person.

7.4 — Correct: C, D

Multi-part requests buried in one sentence get partial answers. Enumerating the parts or supplying a template makes each one explicit.

Why not the others: A adds a turn without clarifying the structure; B a vocabulary change that does not expose the three parts; E duplicates the input and changes nothing about the output.

7.5 — Correct: B, C

Attribution needs a controlled comparison: one variable, fixed inputs, fixed criteria.

Why not the others: A preference without criteria is not measurement; D the model cannot observe its own improvement; E destroys attribution.

7.6 — Correct: D (2, 4, 1, 5, 3)

Diagnosis before treatment: name the gap, find its cause in the prompt, change one thing, re-test on the same inputs, then decide.

Why not the others: A re-runs before anything has been changed; B inspects the prompt before the gap has been named; C changes the prompt before checking whether it is the cause.
